Loading a new database in mysql in Hadoop on local virtual machine

```
# Terminal
git clone https://github.com/manorite/Spark-and-Hadoop-developer-Certification.git

# This will clone in your home directory

# Login to mysql in your VM as root (password cloudera)

mysql -u root -p

create database classic;

create user classic_dba identified by 'classic';

grant all on classic.* to classic_dba;

flush privileges;

exit;

# open a new terminal

mysql -u classic_dba -p

# password

classic

show databases;

use classic;

source mysqlsampledatabase.sql

# validate

show tables;
```
